

Electronic payment reconciliation & analytics in a single software solution

Cashless payment options are increasing all the time. For your Accounts department this means greater complexity and expense. Especially when there are inconsistencies between the amounts due according to the POS data and the incoming payments from payment processors.

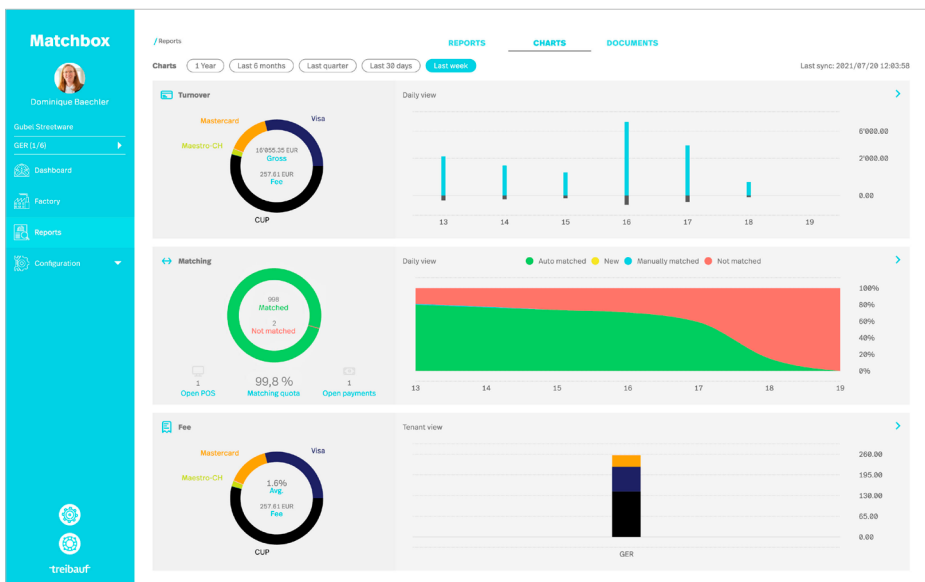

Automated payment reconciliation

Matchbox automatically reconciles all cashless payments with the corresponding amounts paid into your bank accounts by the payment processors.

Payment-Analytics

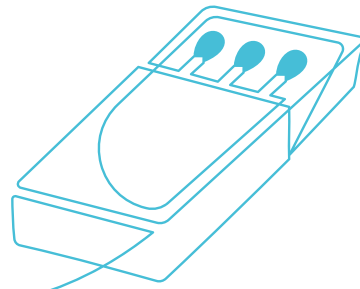

The payment analytics centre transforms the plethora of payment data into informative diagrams, creating a reliable foundation for more effective decision-making.

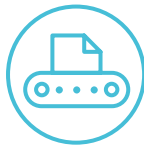

Features of the payment analytics centre

- Displays turnover figures
- Illustrates cost structures
- Shows match rates
- User-specific reports

Your benefits

Reconciliation and accounting with minimal effort

Improved insights for more precise controlling

The key facts about Matchbox

Open-source, standardised interfaces for full flexibility and maximum usability in the future
